

3 4. The method of claim 1 further comprising reading a stored
4 value card at the initiating terminal so as to receive funds corresponding to the
5 designation of funds at the initiating terminal.

1 5. A system for performing an electronic transfer of funds
2 transaction between a sender and a recipient, comprising:

3 an initiating terminal for receiving a designation of an amount of funds
4 to be electronically transferred from the sender to the recipient, and for receiving a
5 security code from the sender;

6 a central terminal in communication with the initiating terminal for
7 providing the initiating terminal with a unique personal identification number
8 corresponding to the electronic transfer of funds transaction, and for storing the
9 designation of an amount of funds, the unique personal identification number and the
10 security code; and

11 a manned kiosk in communication with the central terminal, the
12 manned kiosk including an agent for receiving the unique personal identification
13 number and the security code from the recipient, and for communicating the unique
14 personal identification number and the security code provided by the recipient to the
15 central terminal;

16 wherein the central terminal is operative to compare the unique
17 personal identification number and the security code provided by the recipient with
18 the stored unique personal identification number and the stored security code, and
19 wherein the manned kiosk is operative to dispense funds corresponding to the
20 designation of an amount of funds directly to the recipient when the unique personal
21 identification number and the security code provided by the recipient match the
22 stored unique personal identification number and the stored security code.

1 6. The system of claim 5 wherein the initiating terminal further
2 comprises a cash acceptance mechanism for receiving cash corresponding to the
3 designation of an amount of funds.

1 7. The system of claim 5 wherein the initiating terminal includes
2 a financial card reader for reading information from a stored value card so as to
3 obtain funds corresponding to the designation of an amount of funds.

1 8. The system of claim 5 wherein the initiating terminal includes
2 a scanning device for receiving the security code from the sender.

1 9. The system of claim 1 wherein the manned kiosk includes a
2 dispensing terminal in communication with the central terminal, and the dispensing
3 terminal includes a scanning device for receiving the security code.
